5 TIPS FOR CULTIVATING

An Environmentally-Friendly Office

01 Save By Recycling![1]

100,000 recycled print cartridges save:

Aluminum	9,599 Kilograms
Plastic	40 tons
Oil	1,000,000 liters

Join Sharp's Toner Recycling Program today!

02 Decrease Overall Power Consumption!

With features such as an automatic **walk-up sensor** to wake the machine out of sleep mode and various power consumption mode options, including **standby, sleep** and **power off**, Sharp multifunction printers were designed to minimize overall power consumption.

03 Increase Workplace Efficiency![2]

A typical employee spends

30-40%

of their time looking for information in emails and filing cabinets

A workflow automation solution, such as **Drivve | Image™**, can help organizations reduce overall printing costs and boost efficiency, by converting paper needs to digital workflows.

04 Migrate Toward Paperless Meetings!

Sharp Display Connect software allows for onscreen content—including handwritten notes and drawings made in real time—to be viewed simultaneously on the **AQUOS BOARD® interactive display system** and mobile devices such as PCs, tablets and smartphones. Users can capture onscreen images and save them on their mobile devices to make personal notes.

05 Purchase ENERGY STAR® Certified Products!

The Sharp **AQUOS BOARD interactive display system** is backed by the Energy Efficiency Certification, granted by **ENERGY STAR**, helping customers and businesses alike save money and protect the climate through superior energy efficiency.
