

PaperCut MF for Acute Care

Secure, fast and efficient printing

Doctors and nurses providing acute care have to be flexible and adapt quickly, because their primary goal — patient care — is more than just a service. As a medical professional, you need the right technology to ensure your print infrastructure can keep up.

Acute care is arguably the most time-sensitive, individually-oriented diagnostic field under the healthcare umbrella. Medical professionals need to help patients with a diverse range of medical issues while also protecting their sensitive information. Technology can be our greatest ally; but if it doesn't contribute to efficiency, security and time-to-treatment, it can be a frustrating obstacle.

Challenges

- Distributed printing environments; multiple sites, coupled with an array of devices combined with staff mobility
- Compatibility issues with EMR/EHR (Electronic Medical/Health Records); print jobs vanishing from EMR application
- Doctors, nurses and administrative staff lean heavily on time-sensitive information
- Lack of control over who can print what and where
- Unable to easily track and conduct reporting on employee printing
- Maintain privacy and avoid steep fines for non-compliance by ensuring patient health information is not traceable
- Protect confidential paperwork when sending to other clinics, departments, or external pharmacies

Powerful Print Management for Healthcare

Secure Print Release and Find-Me Printing

Authentication at the printer is a critical step in creating simple and secure access to printing resident information, especially with in-field workers with legacy, mixed fleet devices.

Secure print release combined with Find-Me printing, a roaming print service that allows users to retrieve print jobs at the closest device:

1. Users send print jobs to a single print queue.
2. When ready to pick up, they swipe their badge at the closest printer in order to confirm their identity and release their print job.
3. Their print job is released. And if the print job is never claimed, it is securely deleted.

Find-Me helps solve critical compliance measures for Protected Health Information (PHI) and can remove the risk of steep fines.

EMR/EHR & Fax Integrations

PaperCut keeps it simple by providing full integration into the most popular EHR systems including Epic, Cerner and MediTech to name a few. By interoperating with your EHR system, you can conveniently send print jobs and track every job to a specific user to satisfy your compliance requirements. Also, PaperCut takes any faxing workflow and delivers a secure and reliable experience, with end points and address book lookups.

Visibility With Audit Logs, Reports and Watermarking

Digital signatures, watermarking and audit trails are built-in features to help you bolster the compliance standards you already have in place. PaperCut MF has 80+ standard reports that output to PDF, HTML and CSV and covers visibility to all sites, clinics and staff. And because you can only manage what you measure, PaperCut's bill back and audit trail ties a bow on each department, broken down to a high level or with as much granularity as you need.

Print Driver Deployment

Adding new printers can be tedious. Print Deploy makes our "Clone-Configure-Deploy-Enjoy" approach easy by automating the time consuming, frustrating tasks of setting up print queues and deploying print drivers. It's perfect when you have multiple locations with few IT resources and need to have the right driver with the right person at the right time, even in a mixed computer environment (no matter the operating system or end-user permission level).
