SHARP

# 15 Ways to Protect Your Business from a Cyberattack!

☐

## Security Assessment

It's important to establish a baseline and close existing vulnerabilities. When was your last assessment?

Date: _____

☐

## Spam Email

Most attacks originate in your email. Be sure to choose a service designed to reduce spam and your exposure to attacks.

☐

## Passwords

Apply security policies on your network. Deny or limit USB file storage, enhance password policies, and set user screen timeouts.

☐

## Security Awareness

Train your users—often! Teach them about data security, email attacks, and your policies and procedures.

☐

## Computer Updates

Keep Microsoft, Adobe, and Java products updated for better security. Automate updates to protect your computers from the latest known attacks.

☐

## Advanced Endpoint Detection & Response

Protect your computer's data from malware, viruses, and cyberattacks with advanced endpoint security. Today's latest technology protects against file-less and script based threats.

☐

## Multi-Factor Authentication

Utilize Multi-Factor Authentication whenever you can. It adds an additional layer of protection to ensure that even if your password does get stolen, your data stays protected.

☐

Work with trusted experts who can help assess risks, strengthen defenses and respond quickly when issues arise.

☐

## Dark Web Research

Knowing in real-time what passwords and accounts have been posted on the Dark Web will allow you to be proactive in preventing a data breach.

☐

## SIEM/Log Management

**(Security Incident & Event Management)**

Review all event and security logs from all covered devices to protect against advanced threats and to meet compliance requirements.

☐

## Web Gateway Security

Internet security is a race against time. Cloud based security detects web and email threats as they emerge, and blocks them within seconds—before they reach the user.

☐

## Mobile Device Security

Cyber criminals attempt to steal data or access your network by way of your employees' devices. They're counting on you to neglect this piece of the puzzle.

☐

## Firewall

Turn on Intrusion Detection and Intrusion Prevention features. Send the log files to a managed SIEM.

☐

## Encryption

Whenever possible, the goal is to encrypt files at rest, in motion (think email) and especially on mobile devices.

☐

## Backup

Backup local. Backup to the cloud. Have an offline backup for each month of the year. Test your backups often.

**Take a step to become more resilient against cybersecurity threats. To learn more, visit business.sharpusa.com/security-solutions.**

# Explore Simply Smarter Technology

The latest interactive displays, laptops, document systems and audio visual technology can help your business collaborate and spend smarter

### Collaboration Displays

Take teamwork to the next level with the collaboration displays, including the award-winning AQUOS BOARD interactive display.

### Laptops and Accessories

Wherever your desk may be, conquer your day with innovative and secure laptops, monitors and accessories.

### Unified Communications

Get the tools your team needs through a unified platform for voice, chat and video as well as Microsoft 365 collaboration applications

### Managed Print Services

Identify opportunities to reduce expenses and increase efficiencies in your print environment.

### Commercial Displays and Projectors

From high-impact displays for digital signage, to state-of-theart projectors with minimal maintenance, Sharp helps you communicate brilliantly.

### Copiers and Printers

Models offer hands-free interaction, exceptional image quality, integrated security and are easy to use and maintain.

### Digital Files and Workflows

Digitize paperwork and processes and manage files in one location for secure access, in or out of the office.

### IT Services and Support

Reliable and secure support for network monitoring, threat mitigation, compliance data reporting, data backup and more.

**Learn how we can help support your technology needs today.**
