

Sharp AQUOS BOARD® Interactive Displays

What's the Difference?

Sharp AQUOS BOARD® interactive display systems are much more than your typical interactive whiteboards. Designed for smooth and effortless communication in a wide range of contexts, their highly responsive touch pens allow several people to write on the same touch screen at the same time. And the built-in screen sharing application enables multifaceted wireless communication. Whether in the office boardroom or the classroom, Sharp improves the way you communicate.

No matter what your business, you can find a Sharp AQUOS BOARD interactive display to enhance your productivity. All of the Sharp AQUOS BOARD models have 4K Ultra-HD resolution, SHARP Pen Software, R232-C Control, LAN Control, additional HDMI inputs and up to 40 touchpoints.
